

Фрезер СМТ за дърво профилен за подравняване, с лагер ф 12.7x25.4/70.7 мм, ф 8 мм, 7/8/906

We have designed a series of truly indispensable bits available in a wide range of sizes for your woodworking needs and

your most difficult projects. For precision work on laminates or quick template work with excellent finishing.

Shop tips: these bits are excellent for making through mortises. Use a straight bit (#711.130.11) to groove the through mortise area, then use the drill bit (#517.130.31) to bore a through hole at the end of the groove. Turn the workpiece over to end the mortise. Use the flush trim bit with a cutting length slightly longer than the fillet, following the groove made on the opposite side of the workpiece with the ball bearing guide.
